Keywords: Applications, Data Products, Microsoft Visual Basic 6.0

Abstract:

In this writing, process data processing of goods is essential to avoid errors in the recording process, so that it can obtain accurate information. In order to make data processing report good things and to execute the process in accordance with existing procedures, it would require an application to facilitate the conduct of data processing. Therefore, the author makes the writing entitled "Data Processing Applications Goods" by using one of Microsoft's programming language Visual Basic 6.0 that can create an application program in windows environment.
